Subject: Tom Burke and John Holdren QFRs related to IRIS
Attachments: House SST 0314 OSTP QFRs from JPH clean (2)_health.docx; Burke-QFRs_FINAL_truncated for health.docx

Hello all: I cut and pasted the relevant questions that Tom and John Holdren received with their responses. For John, there are only 4 questions attached---the issue of potential bias in the use of studies funded by industry, the use of nonlinear low-dose extrapolation when a chemical is thought to have a non-mutagenic MOA, deriving toxicity values/setting standards below background levels, and the concept of thresholds for effects.

The questions from Tom Burke are quite focused on IRIS (Ken's name is even mentioned here and there)---about 13 pages of them.

Happy reading...
Lynn
